- But underneath unsustainable bottle necks developed.

“BACK TO NORMAL” SEEMS UNLIKELY AND EVEN UNDESIRABLE
History of the crisis

- Summer 2007: starting problems in US housing market and "toxic" financial products.
- 2010 gradual recovery but major problems and risks remain.
Consequences of the crisis

Loss in world market capitalization since end 2007: 15.3 trn USD (+/- 25% of total)

Loss in world output: 3.7trn USD (6% of total)

Global bank writedowns: 2.8trn USD

35 million new unemployed workers globally since June 2008

5.8trn USD increase in OECD public debt
AND WHAT NOW?

Economic outlook: The official view.
   Worried but improving

Economic outlook: the consensus view.
   More cautious and confusing...and until now too pessimistic.

1. Economic outlook: focus on the consensus view.

US: Growth is back but slowdown after fast recovery end 2009.
1. Economic outlook: focus on the consensus view.

US: GDP GROWTH (yoy in %)

*Department of Commerce figures*

[Bar chart showing US GDP growth from 1970 to 2010, with a BNPP forecast indicated for 2010-2011.]
1. Economic outlook: focus on the consensus view.

**US**: Growth is back but slowdown after fast recovery end 2009.
- Corporate confidence fully recovered.
- Corporate profits recovered.
- Credit spreads normalised.
- But government debt reaches increasingly dangerous levels.
- But consumers remain worried: sticky unemployment, confidence and the need to restore sustainable financial balances.
- But need to reduce macro imbalances.

**RECOVERY SEEMS SUSTAINABLE BUT VULNERABLE**
1. Economic outlook: focus on the consensus view.

EMU: Growth is back but slower than US.
1. Economic outlook: focus on the consensus view.

EMU: REAL GDP GROWTH (yoy in %)

Eurostat figures

Source: Thomson Financial Datastream
1. Economic outlook: focus on the consensus view.

EMU: Growth is back but slower than US.
- Impressing second quarter 2010.
- Corporate confidence remarkably high (especially Germany).
- Investments recover.
- Credit spreads normalise gradually.
- Consumer confidence improves.
- Exports are booming.

- But government debt leaves no room for manoeuvre.
- But sticky unemployment.
- But increasingly diverging economic development of Member States creates confusion and chaos.

SUSTAINABLE GROWTH BUT UNDERMINED BY POLITICAL UNREST
1. Economic outlook: focus on the consensus view.

Asia: Continued growth and apparent stability.
• No fundamental problems with crisis (banks and government debt).
• But based on massive government support.
• But still focused on exports which is unsustainable.

Growth can continue at high speed, but increasing dangers of conflicts with major clients.
1. Economic outlook: focus on the consensus view.

The global picture

- Growth will continue at acceptable level, no double dip.
- Inflation should not be a problem for the next few quarters.
- Government debt is a problem but can be fixed.

In general a comfortable outlook, but lots of remaining structural problems that have to be resolved in order to create a more stable world.

Alternative scenario’s

- A double dip.
- Complete financial chaos.

Where is the upside?
1. **Economic outlook: the consensus view.**

2. **Are we getting out of the mess: overview of developments in risk areas.**
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
  - Confidence stable.

Mortgage Lending
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
  - Confidence stable.
  - Lending to private sector recovers.
  - Profitability back but still vulnerable.
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
  - Confidence stable.
  - Lending to private sector recovers.
  - Profitability back but still vulnerable.
  - Stress tests reassuring but controversial.
Identified weak banks:
(Seven of the 91 banks tested fell short of the minimum Tier 1 capital ratio)
5 Spanish Cajas
Hypo Real Estate (Germany)
ATEbank (Greece)
But renewed uncertainty about the true extent of exposures:

“Lenders shunned on stress tests doubts” (FT, 02/09/2010)

Leading UK and continental European companies are increasingly shunning banks from Spain, Italy and even Germany because they do not believe the Europe-wide stress testing of banks gave a true picture of their financial health.
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
  - Confidence stable.
  - Lending to private sector recovers.
  - Profitability back but still vulnerable
  - Stress tests reassuring but controversial.

- But exposure to risky assets remains significant.
Banking contagion channel: exposure to sovereign and private sector debt

2. Are we getting out of the mess? Overview of risk areas.

Government Finances / Sovereign Debt crisis in Europe

- Divergence within EU: the EURO crisis
- Crisis as a consequence
- Political reaction
  - Rescue package
Eurozone rescue package:
720 bn EUR emergency fund:
- 440bn bilateral loans and guarantees
- 60bn from the EU budget
- 220bn from the IMF

+ 110bn EUR loan to Greece

ECB intervention:
- Liquidity extension to commercial banks (reintroduction of fixed rate, full amount for 3M and 6M loans)
- Purchase of government bonds
- Acceptance of Greek collateral, regardless of the rating
Eurozone rescue package: is it enough?

2. Are we getting out of the mess? Overview of risk areas.

Government Finances / Sovereign Debt crisis in Europe

- Divergence within EU: the EURO crisis.
- Crisis as a consequence.
- Political reaction
  - Rescue package
  - National Austerity Programs.
  - New rules for the Eurozone: Task Force on Economic Governance
Task Force on economic governance.
Agreements of the European Council, October 29.

The creation of a new macro-economic surveillance framework.
- It will detect imbalances and risks, like housing bubbles.
- It will observe the competitiveness of Member States. If a country loses too much competitiveness, action will have to be undertaken, in particular within the Eurozone.

A stronger Stability and Growth Pact.
- Compared to the current situation, sanctions will kick in earlier and progressively: sanctions will be possible before the 3 percent annual deficit is reached (if not enough preventive action is taken). Moreover, sanctions can be decided more easily
- Public debt will be taken more into account, alongside the deficit criterion.

A permanent crisis mechanism
- It should be able to address financial distress and avoid contagion from one country to another. It should also avoid moral hazard.
Reaction of the ECB:

“The Governing Council considers that the proposals do not go as far as the quantum leap in economic governance of Monetary Union that it has been calling for. In particular, the Governing Council is concerned that there would be insufficient atomicity in the implementation of fiscal surveillance, that there is no specification of the rule to reduce government debt ratio, and that financial sanctions have not been explicitly retained under the macroeconomic surveillance procedure.

With regard to the macroeconomic surveillance procedure in particular, the new system of mutual surveillance would need to concentrate firmly on euro area countries experiencing sustained losses of competitiveness and current account deficits. It should be determined by transparent and effective trigger mechanisms. It would be essential that the assessments of macroeconomic imbalances and recommendations for corrective action be given broad publicity at all stages of the surveillance process.”
2. Are we getting out of the mess? Overview of risk areas.

Government Finances / Sovereign Debt crisis in Europe

- Divergence within EU: the EURO crisis
- Crisis as a consequence
- Political reaction.

CONCLUSION:

- PROBLEMS ARE UNDER CONTROL FOR THE TIME BEING BUT THE FUNDAMENTAL ISSUE OF COMPETITIVENESS IS FAR FROM RESOLVED;
- MARKETS DO NOT BELIEVE THIS IS A SOLUTION, ESPECIALLY FOR GREECE
- THIS ISSUE WILL CONTINUE TO WEIGHT ON EU ECONOMIES
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
- Central Banks balance sheets.
- Government finances.
- Divergence within EMU – future of EURO.
- Double Dip?
2. Are we getting out of the mess? Overview of risk areas.

Double Dip?

• Risks:
  • Aggressive fiscal tightening: postponed.
2. Are we getting out of the mess? Overview of risk areas.

Double Dip?

• Risks:
  • Aggressive fiscal tightening: postponed.
  • Exit central banks: postponed.
2. Are we getting out of the mess? Overview of risk areas.

Double Dip?

• Risks:
  • Aggressive fiscal tightening: postponed.
  • Exit central banks: postponed.
  • Growth in US, EU, Asia seems sustainable.
2. Are we getting out of the mess? Overview of risk areas.

Double Dip?

- Risks:
  - Aggressive fiscal tightening: postponed.
  - Exit central banks: postponed.
  - Growth in US, EU, Asia seems sustainable.
  - New shocks: possible, but unpredictable.
2. Are we getting out of the mess? Overview of risk areas.

Double Dip?

• Risks:
  • Aggressive fiscal tightening: postponed.
  • Exit central banks: postponed.
  • Growth in US, EU, Asia seems sustainable.
  • New shocks: possible, but unpredictable.

Conclusion: Possible but unlikely.
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
- Central Banks balance sheets.
- Government finances.
- Divergence within EMU – future of EURO.
- Double Dip?
- Inflation / deflation.
2. Are we getting out of the mess? Overview of risk areas.

Inflation / deflation.

• Core inflation at record lows in both US and EMU.
2. Are we getting out of the mess? Overview of risk areas.

Department of Labour figures
2. Are we getting out of the mess? Overview of risk areas.

EMU: CONSUMER PRICES (yoy change in %)
2. Are we getting out of the mess? Overview of risk areas.

Inflation/deflation

- Core inflation at record lows in both US and EMU.
- Inflation expectations are trending downwards in the US, while they are sticky in the EMU.
2. Are we getting out of the mess? Overview of risk areas.

EMU INFLATION EXPECTATIONS (within 12 months)
Inflation derived from CEM future contracts

Source: Bloomberg
2. Are we getting out of the mess? Overview of risk areas.

Inflation/deflation
- Core inflation at record lows in both US and EMU.
- Inflation expectations are trending downwards in the US, while they remain stable in the EMU.
- Inflationary pressures from monetary expansion not an issue for the time being.
2. Are we getting out of the mess? Overview of risk areas.

EMU: MONEY SUPPLY (yoy growth in %)

European Central Bank figures

LT AVERAGE M3 GROWTH: 7.4%
2. Are we getting out of the mess? Overview of risk areas.

Inflation/deflation
- Core inflation at record lows in both US and EMU.
- Inflation expectations are trending downwards in the US, while they remain stable in the EMU.
- Inflationary pressures from monetary expansion not an issue for the time being.
- But commodity prices have to be watched.
2. Are we getting out of the mess? Overview of risk areas.

- Copper
2. Are we getting out of the mess? Overview of risk areas.

Inflation/deflation
- Core inflation at record lows in both US and EMU.
- Inflation expectations are trending downwards in the US, while they remain stable in the EMU.
- Inflationary pressures from commodities and monetary expansion.

Conclusion:
no immediate threat but inflation / deflation switch is thin line.
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
- Central Banks balance sheets.
- Government finances.
- Divergence within EMU – future of EURO.
- Double Dip?
- Inflation / deflation.
- Deleverage.
2. Are we getting out of the mess? Overview of risk areas.

Deleverage.

• Deleveraging is gradually going on everywhere (except governments), without bottle necks until now.
• Europe is slower than the US.

- Global imbalances.
- Geopolitical stress / protectionism.
2. Are we getting out of the mess? Overview of risk areas.

Geopolitical stress / protectionism.

US raises pressure for renminbi rise
(FT, 15/09/2010)
Washington took aim at China’s “unfair” trade policy on Wednesday, with lawmakers threatening legislation against Chinese currency intervention and the administration filing two new cases against Beijing at the World Trade Organisation.

Fears of global currency war rise
(FT, 12/10/2010)
Thailand is introducing a tax on foreign holdings of bonds, the latest in a string of attempts by emerging economies to curb destabilising capital inflows amid fears of a global currency war. (...) Emerging markets have been caught in the middle of a seemingly intractable dispute over exchange rates and capital flows between the US and China.
2. Are we getting out of the mess? Overview of risk areas.

- Banking health.
- Central Banks balance sheets.
- Government finances.
- Divergence within EMU – future of EURO.
- Double Dip?
- Inflation / deflation.
- Deleverage.
- Global imbalances.
- Geopolitical stress / protectionism.

THE BIGGEST RISK: INTERCONNECTEDNESS AND POTENTIAL CHAIN REACTIONS.
2. Are we getting out of the mess? Overview of risk areas.

**DRAMA**

Example of chain reactions.

Diagram:
- Double dip
- Deflation
- Banking trouble
- Government finance (Sovereign risk)
- Euro crisis

Nodes and arrows represent the interconnections among risk areas.
2. Are we getting out of the mess? Overview of risk areas.

- Central Banks balance sheets.
- Government finances.
- Divergence within EMU – future of EURO.
- Double Dip?
- Inflation / deflation.
- Deleverage.
- Global imbalances.
- Geopolitical stress / protectionism.

CONCLUSION: Situation remains vulnerable, but is under control.
Major risks have not been resolved.
3. Macro Movements.

- Politics are back.
3. Macro Movements.

Politics will dominate the agenda: a challenging balancing act
- Normalise banking system
- Deleverage the economy
- Normalise central bank policy and balance sheets
- Stabilise public debt levels
- Develop new regulatory framework for the financial industry.
- Revive international trade (or switch to protectionism?)
- Solve global environmental issues.
- Towards a new financial, economic and political world order
  - WITHOUT KILLING THE RECOVERY
3. Macro Movements.

- Politics are back.
- From west to east as a gradual process.
3. Macro Movements.

3. Macro Movements.

- Politics are back.
- From west to east as a gradual process
  - But now speeding up after three shocks of the western world:
    - Banking crisis
    - Economic crisis
    - Sovereign crisis
3. Macro Movements.

- Politics are back.
- From west to east.
- Europe’s specific weaknesses/vulnerabilities:
  - Internal disputes and divergence, incomplete union
  - Uncertainty about the future of euro
  - Rigid monetary policy (or is it a strength?)
  - Huge banking sector
Thank you.
